SUMMARY

Full-stack developer building enterprise applications for a biomedical research institute. Specialized in Workday Finance and HCM integrations, approval and workflow systems for HR and Finance, and legacy modernization. Node.js, TypeScript, Vue 3, SQL Server.

SKILLS

Frontend Vue 3, Quasar, React, TypeScript, JavaScript
Backend Node.js, Express, PHP, Symfony, REST APIs
Data SQL Server, Stored Procedures
Integrations Workday Finance, Workday HCM, SOAP web services, XML
Cloud & Identity Azure, Azure AD / Entra ID
Tooling Git, GitHub Actions, Jest, Linux

EXPERIENCE

- The Wistar Institute** Biomedical research institute, NCI-designated Cancer Center, 300+ staff May 2023 – Present
Full-Stack Application Developer Vue 3, TypeScript, Node.js, Express, SQL Server, Azure AD
- Built Node.js/TypeScript integrations with **Workday Finance and HCM**, generating SOAP XML requests to submit supplier invoices, create journal entries, and sync employee, grant, and financial data across internal systems. Handled tenant-side setup including Integration System Users and API security.
 - Built an institute-wide **Staff Evaluation Platform** with a configurable workflow engine (per-department forms, grading scales, multi-step approval chains), replacing paper and email forms tracked by hand. Cut the evaluation cycle from 4 weeks to 2 and removed manual follow-up by HR.
 - Developed an **Annual Compensation Platform** that automated salary review and approval chains across HR and Finance, replacing spreadsheet tracking. Gave HR real-time visibility into review status and cut the cycle by 2 weeks.
 - Built internal operations systems: a **Device Management System** tracking assignments, MAC and IP addresses across ~2,100 active devices for IT security and inventory audits, and a **Room Reservation System** used daily across the institute for meeting, catering, and equipment bookings.
 - Led migration of legacy **PHP/Symfony** applications to Node.js/TypeScript and Vue 3, rewriting production systems incrementally with no interruption for daily users.
 - Established a CI/CD pipeline (GitHub Actions, self-hosted runners, key-based deployments), replacing manual releases from personal server accounts and standardizing deployment across all internal applications.
- Liga Agency** March 2022 – March 2023
Frontend Developer React, Redux, Styled Components
- Built client-facing web applications with React, Redux, and CSS as part of a cross-functional development team.
 - Participated in code reviews and contributed to shared coding standards.

EDUCATION

HTMLeAcademy React Developer, professional retraining April 2021 – May 2022
Peoples' Friendship University Bachelor in Management September 2016 – July 2020
